

VOIP.COM's Cloud PBX Business Phone Service Solutions Now Available In The Los Angeles Area

VoIP Telecommunications Provider Expands Service Area, Now Offering Major Phone Bill Savings Opportunities To Local, Small- And Medium-Sized Businesses

PRNewswire VOIP.COM June 17, 2013 11:37 AM

WINNEKTA, Calif., June 17, 2013 /PRNewswire/ --VOIP.COM, a telecommunications provider of residential and business packages, today announced its Cloud PBX Business Phone Services are expanding, with services and support now available to small- and medium-sized businesses in the Los Angeles, CA metropolitan area.

VoIP (or Voice over Internet Protocol), a technology that enables people to use the Internet as the transmission medium for phone calls, is significantly less expensive than typical telephone long distance packages. The service requires only one high speed Internet phone connection, and can serve for multiple phone lines with no loss in functionality, reliability or voice quality.

Rick Massoumi, CEO of ProMounts discussed his company's global usage of VOIP.com, stating; "My company has a lot of clients overseas. With VOIP.com, we have our local number here in Torrance, as well as local numbers in London and Mexico City."

VOIP.COM's Premium Cloud PBX Business Phone Service system gives small and medium size businesses full mobility features, allowing employees to be more productive. It requires no additional software and works with any operating system with a modern web browser. Its Business and Hosted PBX service packages range from single-line business accounts all the way up to multiple-location hosted PBX systems, with fully-featured Auto-Attendants and Call Hunt Groups. All VOIP.COM business plans offer toll-free number options and are readily upgradable to accommodate a growing business. VOIP.COM, which provides on-site installation and support provided by Geek Squad, a Best Buy company, also offers some of the most competitive international rates in the industry.

"We are excited to bring our Cloud PBX Business Phone Service to the L.A. area," said Jim Murphy, President, VOIP.COM. "This unique option specifically eliminates the legacy telephone systems that need to be supported by proprietary companies, and ultimately puts control of the phone and related bills back into the customer's hands." According to Murphy, Los Angeles-area businesses that utilize VOIP.COM's Premium Cloud PBX Business Phone Service can expect to see about 75 percent in savings on their monthly phone bills.

"As we outgrew our office, we wanted some agents to work from home" said Diana Mikael, Founder of SDG Insurance Services. "With VOIP.com's Cloud PBX, those telecommuters are part of our office phone system. It's almost like they are here in the office." Features available to VOIP.COM Cloud PBX Business clients include everything from unlimited and local long distance, voicemail, 3-way-calling, advanced call forwarding and call waiting/hold options to caller ID, direct international dialing, fax-to-email, do-not-disturb, incoming call manager, iPhone and Android mobile apps, music-on-hold and much, much more.
